

## INSTRUCTIONS

**All measurements must be made** with a flexible steel tape to the nearest one-eighth of an inch. To simplify addition, please enter fractional figures in **eighths**.

**Official measurements** cannot be taken for at least sixty days after the animal was killed. **Please submit photographs.**

**Supplementary Data measurements** indicate conformation of the trophy, and none of the figures in Lines A, B and C are to be included in the score. Evaluation of conformation is a matter of personal preference.

**A. Number of Points on Each Antler.** To be counted as a point, a projection must be at least one inch long, with its length exceeding the width at one inch or more of length. All points are measured from tip of point to nearest edge of beam as illustrated. **Beam tip is counted as a point but not measured as a point.**

**B. Tip to Tip Spread** measured between tips of antlers.

**C. Greatest Spread** measured between perpendiculars at right angles to the center line of the skull at widest part whether across main beams or points.

**D. Inside Spread** of main beams measured at right angles to the center line of the skull at widest point between main beams. Enter this measurement again in "Spread Credit" column if it is less than or equal to the length of longer antler. If longer, enter longer antler length for spread credit.

**E. Total of Lengths of All Abnormal Points.** Abnormal points are considered to be those nontypical in shape or location. It is very important, in scoring nontypical heads, to determine which points are to be classed as normal and which are not. To do this, study carefully the character of the normal points on the diagram, which are marked G-1, G-2, G-3, etc. On the trophy to be scored, the points which correspond to these are measured as normal. **All others over one inch in length (See A above) are considered abnormal.** Various types of abnormal points are shown (marked with an E) on the diagram. Measure the exact length of each abnormal point, over the outer curve, from the tip to the nearest edge of the beam or point from which it projects. Then add these lengths and enter the total in the space provided. **Note:** To be considered non-typical the trophy must have **at least 10"** of non-typical material.

**F. Length of Main Beam** measured from lowest outside edge of burr over outer curve to the most distant point of what is, or appears to be, the main beam.

**G-1-2-3-4-5-6. Length of Normal Points.** Normal points project from main beam. They are measured from nearest edge of main beam over outer curve to tip.

**H-1-2-3-4. Circumferences.** If first point is missing, take H-1 and H-2 at smallest place between burr and second point. If fourth point is missing, take H-4 half way between third point and beam tip.

---

### Print or Type All Information

Hunter's Name: \_\_\_\_\_ Phone Number: ( \_\_\_\_\_ ) \_\_\_\_\_

Address: \_\_\_\_\_  
(Zip Code)

Date Deer Killed: \_\_\_\_\_ Season: \_\_\_\_\_

Location of Kill: County: \_\_\_\_\_ Township: \_\_\_\_\_ DMZ: \_\_\_\_\_

Hunter License # \_\_\_\_\_

Check Station: Name: \_\_\_\_\_ Town: \_\_\_\_\_

Legal Possession Seal # \_\_\_\_\_

Present Owner and Address (if different than above): \_\_\_\_\_

I (hunter or applicant) swear the above statements to be true and that I took this deer in accordance with the laws and regulations of the State of New Jersey. I consent to the use of my name and picture in this contest.
