Trawl-tech: Chasing the Future of Fisheries Research

By Greg Hinks, Principal Biologist

Today, this equipment has been transformed by applying the science of hydrodynamics—which utilizes the forces of fluids, like seawater—to achieve the same result as the old doors, but at half the weight. The functioning of these advanced-style otter trawl doors resembles an airplane wing by using the redirection of water as it flows over the gear to provide lift. Not only do modern trawl doors weigh significantly less—making them more fuel-efficient because of the decreased mass—they are made entirely of steel resulting in sturdier equipment.

Scientists now use wireless net-monitoring systems to reveal how a net is performing in the water. Special sensors attached to the fishing gear relay information back to the boat via a hydrophone, providing virtually any imaginable measurement one may desire to know about the net. Wingspan (the distance from one side of the net to the other) is constantly monitored, informing the captain if the net is fully open, while a bottom-contact sensor relies entirely on the experience of the captain behind the wheel. Deployment complications could result in an incomplete opening of the net or perhaps the weighted “footrope” intended to dredge the ocean floor might not be making contact.

New Jersey Division of Fish and Wildlife’s Ocean Stock Assessment Survey samples fish in near-shore ocean waters from Sandy Hook to Cape May. Sampling is conducted with a 30-meter wide bottom otter-trawl, a net designed to drag along the seabed. An otter-trawl includes components referred to as doors.

Historically, an otter door was merely a slab of wood held in a steel frame. At nearly 1,200 pounds of dead weight per door, they were essential for the trawl net to function. Two otter doors maintain the trawl net opening by providing resistance against water as they are pulled by the vessel.

Today, this equipment has been transformed by applying the science of hydrodynamics—which utilizes the forces of fluids, like seawater—to achieve the same result as the old doors, but at half the weight.

The Tackle Box

New Jersey Division of Fish and Wildlife’s Ocean Stock Assessment Survey samples fish in near-shore ocean waters from Sandy Hook to Cape May. Sampling is conducted with a 30-meter wide bottom otter-trawl, a net designed to drag along the seabed. An otter-trawl includes components referred to as doors.

Historically, an otter door was merely a slab of wood held in a steel frame. At nearly 1,200 pounds of dead weight per door, they were essential for the trawl net to function. Two otter doors maintain the trawl net opening by providing resistance against water as they are pulled by the vessel.

Today, this equipment has been transformed by applying the science of hydrodynamics—which utilizes the forces of fluids, like seawater—to achieve the same result as the old doors, but at half the weight.

Like a fisherman’s hook in the water, trawl nets are nearly invisible once deployed. In the past, knowledge of how a net was performing was based entirely on the experience of the captain behind the wheel. Deployment complications could result in an incomplete opening of the net or perhaps the weighted “footrope” intended to dredge the ocean floor might not be making contact.

Scientists now use wireless net-monitoring systems to reveal how a net is performing in the water. Special sensors attached to the fishing gear relay information back to the boat via a hydrophone, providing virtually any imaginable measurement one may desire to know about the net. Wingspan (the distance from one side of the net to the other) is constantly monitored, informing the captain if the net is fully open, while a bottom-contact sensor relies entirely on the experience of the captain behind the wheel. Deployment complications could result in an incomplete opening of the net or perhaps the weighted “footrope” intended to dredge the ocean floor might not be making contact.

Marine biologists use rugged, waterproof, dustproof handheld computers like Juniper Systems’ Allegro 2, below, that perform under rough and wet conditions during trawl surveys.
Technological advances in the field of fisheries research continually enhance and improve the way data is collected, making it faster, easier and more efficient to count fish. While these advancements may come with a hefty price tag, the payoff is immense, often resulting in new data that was previously unobtainable.

indicates whether the footrope is on the ground as it should be. Additional data, such as temperature and depth, are constantly recorded—information that was previously difficult to monitor over the course of a 20-minute sampling tow.

The Thermometer

Since its first launch in 1989, the New Jersey Stock Assessment Survey has always monitored water quality parameters such as dissolved oxygen and salinity, but the measurement techniques have changed dramatically. Traditionally, fisheries scientists would collect water samples from various ocean depths and transport them back to their laboratory. Hours would be spent performing Winkler titrations—a chemically-based analysis to determine the amount of oxygen contained in a water sample. Although tried and true, the method required glass laboratory components, chemicals and a skilled scientist familiar with this methodology along with the ability to interpret the results. And this analysis only determines the water’s dissolved oxygen level! Numerous additional complex tests would be required to obtain other water quality parameters important to evaluating the conditions from where the fish were sampled.

Fisheries scientists now use electronic devices to obtain this data. A “SONDE” device (Shipboard Oceanographic Networked Data Environment) now records everything scientists need to know in one convenient unit. Think of it as an environmental Swiss Army knife. Multiparameter SONDEs, such as those used for the Stock Assessment Survey, are lowered to the ocean floor by a data cable connected to a hand-held display unit aboard the ship. Measurements of water depth, temperature, salinity, dissolved oxygen and pH are recorded every half-second during the device’s voyage to the bottom of the sea and back. What used to take hours and resulted in one set of measurements each at the bottom and surface of the water column, now takes only minutes and provides a complete chemical profile of depths approaching 90 feet.

The Fishing Log

The bulk of the information gathered by the Ocean Stock Assessment Survey is biological data on the fish species sampled. Most of this data is length and weight collected from thousands of fish every year. Paper data-sheets used to be the only way to record the large amount of information obtained from each drag of the net. A biologist would record the weight of each basket loaded with a particular fish species, then measure the length of every fish in that basket. All this data could fill many double-sided data sheets. Once a survey was completed, each data sheet would be checked for errors, entered into a computer database and then verified to be error-free. Repeating this process for nearly 200 samples annually required several staff members numerous weeks to complete.

Miniaturization of electronic components has expanded and simplified fisheries data collection by means of hand-held computers, much like a smartphone. The former steps for data-recording, entry and error-checking are reduced to a single step of data-entry, followed by a quick check for erroneous or missing information. One person can handle updating the database in only a few days.

Advances in technology have proven invaluable to fisheries research scientists. It’s difficult to imagine what might be the next big leap forward in marine fisheries research—but it is eagerly awaited.

With a YSI/Xylem brand SONDE instrument, surveyors measure water quality parameters important for monitoring environmental trends.
The Skillful Angler Program is designed both to supplement the New Jersey Record Fish Program and to acknowledge that many anglers catch freshwater and marine fish that are not record size but are still worthy of recognition because the size and weight of the fish sufficiently tested the angler's skill. Open to resident and non-resident anglers. All fish must be caught in New Jersey waters using hook and line during legally open seasons.

Saltwater species taken from a boat must have been caught from a boat that left from, and returned to, a New Jersey port during the same trip.

Anglers can now submit their application and photo(s) electronically! Program rules and steps to enter are found here https://njfishandwildlife.com/skflang.htm. Anglers qualifying for a Skillful Angler award receive a certificate and patch as a testament to their achievement. The Program has three main divisions: Adult (for anglers age 16 and older), Junior (under age 16) and Catch & Release (based on length). A clear, side-view photo that allows accurate species identification must be included with each application. Additional good quality (and high resolution) photos with the angler are welcome and appreciated.

The Skillful Angler Program recognizes different levels of fishing expertise. An angler who submits five applications of qualifying size for the same species will receive a Specialist Certificate and patch. An angler who submits five applications of qualifying fish of different species will receive a Master Certificate and patch. Catch 10 or more qualifying species of fish within the year, and the angler will earn an Elite Angler Certificate and patch.

For new anglers, the Program also recognizes your first fish caught no matter the age of the angler. Qualified anglers will receive a First Fish certificate.

The New Jersey State Record Fish Program requires a separate application and is based on weight alone. Scale certification documentation and a weighmaster's signature are necessary. Other rules apply. Visit Fish and Wildlife's website at NJFishandWildlife.com for a complete list of current state records. See also page 28.

There are also four “Slam” categories — an Inshore Slam 1, Inshore Slam 2, Offshore Pelagics Slam and Marlin Slam. For the Inshore Slam 1, an angler must submit qualifying applications for a striped bass, bluefish and fluke. For the Inshore Slam 2, an angler must submit qualifying applications for black sea bass, tautog, and weakfish. The Offshore Pelagics Slam will be obtained if an angler submits qualifying applications for bluefin tuna, bigeye tuna, yellowfin tuna and dolphin. For the Marlin Slam, an angler must submit qualifying applications for a white marlin and a blue marlin.

Each month, the leaders of each category and species will be posted on our Skillful Angler Leader Board web page. At the end of the year, special recognition is given to anglers who catch the largest fish in each species category. The winner of each category is sent a special certificate recognizing his/her accomplishment along with a winner's patch as the best of New Jersey's Skillful Anglers.

Fish must be measured from the tip of the nose (with mouth closed) to the tip of the tail. For catch and release categories, the fish must be measured and photographed alongside a ruler. For Adult/Junior Division, fish must be weighed and measured by a fishing license agent, tackle shop or authorized Fish and Wildlife fisheries biologist. Anglers must submit a photograph of the fish caught, alongside a ruler for clear identification and measurement verification. Be sure the rule markings are legible. All photos become the property of the NJDFW and may be used for promotional purposes.

To apply, go to: NJFishandWildlife.com/pdf/skflangapp-salt.pdf.

Brian Cassidy of Red Bank made his way onto the state record fish list recently by landing a gray triggerfish while spearfishing. Brian was free diving off the shore of Monmouth Beach when he landed the 3-pound, 13-ounce fish. The new record gray triggerfish/spearfishing measured 16 1/8 inches in fork length.

New Jersey Division of Fish and Wildlife’s Record Fish Program honors anglers who catch the largest of select species of freshwater and saltwater fish. Record size is based on weight alone; there are no line classes. Currently there are 76 marine species eligible for entry into the program which includes a new spearfishing category with 17 additional species.

Anglers are reminded that the objective of the Record Fish Program is to increase awareness of fishing opportunities for species that are regularly sought and routinely found on or off the coast of New Jersey. The original list of 72 species was pared down with that objective in mind.

Twelve species are now retired from the list of program-eligible fish, but remain on a separate list posted on Fish and Wildlife’s website. One historical catch is also retired and posted on the list.

Anglers should be aware of the procedure in effect for entering the Record Fish Program. First, separate applications are required for freshwater and saltwater species. Second, for saltwater entries, it is now mandatory that a marine biologist inspect any potential record fish, as identification solely by photo is not always accurate. Anglers must call Fish and Wildlife’s Nacote Creek Research Station at (609) 748-2020 to make arrangements for inspection. In most instances, the fish must be transported to this office in Port Republic. However, in the case of extremely large fish (i.e., shark and tuna), a biologist should be available to travel for dockside inspection. Note that all scale certification requirements still apply, including a valid Certificate of Inspection/Test Report and current Registration Certificate issued by the County Office of Weights and Measures.

**New Jersey State Record Marine Fish — Spearfishing Category**

In 2014, the NJ Record Fish Program expanded with the addition of a Spearfishing category for saltwater. Seventeen (17) species commonly sought after by spearfishers are part of the Program. Spearfishers now have a unique opportunity to be recognized in New Jersey's Record Fish Program. Anglers are reminded that the objective of the Record Fish Program is to increase the awareness of fishing opportunities for species that are regularly sought and routinely found in or off the coast of New Jersey.

* Fish was recognized by the International Underwater Spearfishing Association as a world record.
Fishing provides enjoyable and relaxing recreation. Fish are an excellent source of protein and other nutrients and play a role in maintaining a healthy, well-balanced diet. Many anglers enjoy cooking and eating their own catch. However, elevated levels of potentially harmful chemical contaminants such as dioxin, polychlorinated biphenyls (PCBs), pesticides and mercury have been found in certain fish and crabs in some New Jersey waters. Fish consumption advisories have been adopted to guide citizens on eating the fish species taken from the identified waters, it is essential to follow safe consumption practices.

To reduce exposure to harmful chemical contaminants when preparing and eating the fish species taken from the identified waters, it is essential to follow the guidelines provided. The DEP encourages you to consult the Fish Smart-Eat Smart Fish Advisory Guide or, for a complete list of state and federal marine fish consumption advisories visit www.FishSmartEatSmartNJ.org for making decisions about eating recreationally caught fish and crabs.

### Special Management Zones for 13 Artificial Reef Sites off New Jersey

NOAA Fisheries has established 13 artificial reef sites as special management zones. Fishing is allowed year-round with handline, rod and reel, or spear (including the taking of fish by hand). All other gears are prohibited.

### FAQs

As a recreational fisherman, can I continue fishing on these reefs with rod and reel gear?

Yes, anyone may fish on the reefs year-round using rod and reel gear.

Is commercial fishing allowed in these areas?

Yes, commercial fishing with handline, rod and reel, or spearfishing is allowed, if you have the proper state and federal permits. However, all other fixed and mobile gears are banned, including pots/traps and pelagic longlines.

Sedge Island Natural Resource Education Center Programs — Summer 2019

- Sedge Island Fishing Experience: A 4-day 3-night marine fishing intensive program. Open to students going into grades 8 and 9 in the fall of 2019.
- Barnegat Bay Field and Research Experience: A 6-day 5-night program focused on conducting field research. Open to high school students.
- Sedge Island Field Experience: A 4-day 3-night program that has students work alongside biologists in the salt marsh field. Open to students going into grades 7, 8 and 9 in the fall of 2019.
- Bay to Bowl: A 3-day 2-night program open to adults interested in harvesting food from the bay and learning how to prepare and cook it.

For more details, dates and cost visit NJFishandWildlife.com/sedge.htm or contact Karen Byrne at Karen.Byrne@dep.nj.gov.

Law Enforcement and Regulation Information

Contact a New Jersey Division of Fish & Wildlife Law Enforcement office that serves the county where you hunt or fish.

- Northern Region — (908) 735-8240 (Bergen, Essex, Hudson, Hunterdon, Morris, Passaic, Somerset, Sussex, Union and Warren counties)
- Central Region — (609) 259-2120 (Burlington, Mercer, Middlesex, Monmouth and Ocean counties)
- Southern Region — (856) 629-0555 (Atlantic, Camden, Cape May, Cumberland, Gloucester and Salem counties)
- Marine Region — (609) 748-2050 (coastal and bay areas)
- To report violations anonymously call Operation Game Thief — (855) OGT-TIPS

Attention Boaters

Keep Our Water Clean—Use Pumpouts

Ready To Serve Boaters! Visit marina pumpout facilities or contact one of the pumpout boats. A complete listing of operational pumpout facilities at marinas and detailed information on the pumpout boats can be found at NJBoating.org.

Proper maintenance and operation of your on-board toilet and holding tank are critical to ensure they function properly.

- Always use sufficient water when flushing
- Use toilet paper designed for use in marine/RV systems
- Have your marina inspect your onboard toilet system to make sure it is operating properly

Operation Game Thief

Report Abuse of our Outdoor Heritage!

1-855-OGT-TIPS

24 Hours a Day, Seven Days a Week

The person who poaches, pollutes habitat and abuses public land tarnishes the image of sportsmen and robs us of our fish and wildlife as well as tax and license dollars. You can make a difference.

Call OGT to report:

- Negligent use of firearms
- Over the limits for game and fish
- Commercial exploitation of fish and wildlife
- Pollution of habitat, dumping on state land
- Destruction of signs and state property
- Illegal killing, taking or possession of any wildlife

It's Free. It's Confidential.

You May Be Eligible for a Reward.

Funded by the New Jersey State Federation of Sportsmen’s Clubs. Designed to encourage sportsmen to report poaching and wildlife crimes.
